Professional Summary

Senior Data Engineer at Bajaj Finance Ltd with expertise in building event-driven, scalable data systems, AI-powered automation, and real-time data pipelines. Proven track record of designing robust data lakes, analytical warehouses, and intelligent agent solutions that drive operational efficiency and data-driven decision-making at scale.

Work Experience

Senior Data Engineer August 2024 – Present

Bajaj Finance Ltd.

- Designed and implemented a real-time, event-driven Intelligent Rapid Lead Response System (RapidLR) to process and manage leads from Bajaj Finance app and web platforms with high scalability and reliability.
- Engineered and deployed an AI-powered ticket resolution agent on Databricks, leveraging LLMs to autonomously triage, categorize, and resolve support tickets — reducing manual intervention and mean time to resolution (MTTR).
- Built an event-driven architecture leveraging Azure Kubernetes Service (AKS) with KEDA-based auto-scaling, ensuring efficient resource utilization and high throughput during traffic spikes.
- Developed and managed data pipelines for ingesting, processing, and routing lead data across multiple microservices and analytical systems in real time.
- Integrated real-time event notifications for marketing and engagement campaigns such as IPL, Asia Cup, and user engagement events, improving customer interaction and conversion rates.
- Implemented robust monitoring, logging, and alerting frameworks to ensure system observability and proactive issue resolution.

Data Engineer April 2023 – August 2024

Bajaj Auto Finance Ltd.

- Built scalable ETL/ELT pipelines using modern data engineering frameworks and orchestration tools to automate data ingestion, transformation, and loading.
- Optimized data models and storage structures to support fast query performance for data analysts.
- Collaborated with business and analytics teams to define data requirements, KPIs, and reporting standards for better decision-making.
- Integrated diverse data sources (application databases, APIs, and third-party systems) into a unified analytical environment.

Data Engineer Intern October 2022 – April 2023

Bajaj Auto Finance Ltd.

- Learned and worked on data lake and data warehouse design concepts.
- Gained hands-on experience with ETL pipelines and data ingestion workflows.
- Assisted in data cleaning, transformation, and modelling for reporting use cases.

Technical Skills

Programming & Scripting: Python, C#, SQL
Data Engineering: ETL/ELT Pipelines, Data Lake & Data Warehouse Design, Data Modelling, Data Quality & Validation
AI & Machine Learning: AI Agents, LLM Integration, Retrieval-Augmented Generation (RAG), Prompt Engineering, Databricks AI/ML Platform
Cloud & DevOps: Microsoft Azure (Event Hubs, AKS, KEDA, Data Factory, Blob Storage), CI/CD
Big Data & Streaming: Event-Driven Architecture, Real-Time Data Processing, Streaming Pipelines
Databases: Oracle, SQL Server, Cosmos DB, MongoDB
Tools & Frameworks: Git, Docker, Kubernetes, Power BI, Databricks
Other: System Design, Scalability & Performance Optimization, Monitoring & Alerting

Education

Master of Technology in Artificial Intelligence & Machine Learning April 2026 – April 2028

BITS Pilani (Work Integrated Learning Programme)

Bachelor of Technology in Mechanical Engineering July 2018 – June 2022

Gautam Buddha University *Elective: Industrial Automation and Robotics*

Certifications

Databricks Certified Data Engineer Associate
